SUMMARY

Self-directed software developer with hands-on production experience across full-stack web development and backend systems engineering, currently pursuing a B.Sc. in Software Engineering. Built and deployed a multi-tenant SaaS platform (Laravel/PHP) with tenant-isolated data and role-based access control, and an independent cross-platform system-management application (Python/FastAPI) spanning backend API design, security auditing, desktop packaging, and CI/CD release automation. Comfortable across the full lifecycle: architecture, implementation, automated testing, and deployment. Open to freelance projects, remote roles, and internship opportunities.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, SQL, HTML/CSS, Bash

Backend & Frameworks: Laravel, FastAPI, RESTful API design, SQLAlchemy, Alembic

Databases: MySQL/MariaDB, PostgreSQL, SQLite

Frontend: Blade, Tailwind CSS, Bootstrap, responsive design

DevOps & Deployment: Git, GitHub Actions (CI/CD), Railway, Netlify, Hostinger, PyInstaller, Inno Setup

Engineering Practices: Multi-tenant architecture, authentication & RBAC, automated testing (PHPUnit, pytest), database transactions & concurrency control, security auditing, cross-platform development

AI-Assisted Development: Use Claude and GitHub Copilot to accelerate implementation, debugging, and architecture planning — all resulting code independently tested and verified before integration; also integrate OpenAI's API as a product feature (voice-to-structured-data extraction in MediNest)

PROJECTS

MediNest — Multi-Tenant Pharmacy Management SaaS

Laravel 12, PHP, MySQL/MariaDB, Tailwind CSS | github.com/tayab-ghafoor/MediNest | Live: medinest.bela002.com

- Designed a multi-tenant SaaS platform with a three-tier role system (Super Admin, Pharmacy Admin, Staff); tenant isolation is enforced at the database query layer via a global Eloquent scope, not just hidden in the UI.
- Built purchase and sale transactions with database-level row locking to prevent overselling under concurrent access; sales validate real-time stock before completing and auto-generate invoices.
- Added voice-assisted data entry with deterministic parsing and optional AI-based (OpenAI) extraction for free-form speech.
- Wrote an automated PHPUnit test suite and configured GitHub Actions CI; deployed to production on Hostinger and diagnosed/fixed a live defect end-to-end, from log analysis to root-cause resolution.

SysNova CLI — Cross-Platform System Management Platform

Python, FastAPI, PostgreSQL, SQLAlchemy | github.com/tayab-ghafoor/sysnova_cli

- Architected a ~20,000-line, 100+ module Python application with a 23-file automated test suite, covering system health monitoring, automated backups, and diagnostics — distributed as native Windows and Linux installers.
- Built an AI-powered log analysis feature that scrubs sensitive data (credentials, tokens, IPs) from logs locally before any content reaches an AI API or remote server, then returns AI-generated fix suggestions.
- Built a FastAPI backend with JWT authentication, subscription/payment handling, and an offline-first SQLite fallback for local-only operation.
- Conducted and documented a full security audit of the authentication system (30 findings, including a critical plaintext credential leak) and remediated every finding, including brute-force protection and rate-limiter concurrency bugs.
- Built a cross-platform CI/CD release pipeline (GitHub Actions, PyInstaller, Inno Setup) producing checksum-verified, auto-updating installers, and integrated cloud backup via rclone with OS-native credential storage across multiple providers.

Context Handoff — Cross-Platform AI Chat Extension

JavaScript, Chrome Extension (Manifest V3) | github.com/tayab-ghafoor/ai-context-handoff — carries compacted, code-preserving context between AI chat platforms (Claude, ChatGPT, Gemini) with a review-before-send handoff step.

EDUCATION

B.Sc. Software Engineering — University of the Punjab, Lahore

Expected Graduation: 2030

CERTIFICATIONS & TRAINING

AI Web Development Cohort — DTAN, Lahore (2026) · Web Development Fundamentals — DTAN, Lahore · Google IT Automation with Python — Coursera (In Progress)

Languages: Urdu (Native) · English (Fluent)
